

## How To Select Energy Efficient Products

The easiest way to do this is to look out for the energy saving logo.

This logo guarantees that the product you are buying will save you money, the environment along with saving energy.

The sign can be found on light fittings, light bulbs, gas and oil burners, washing machines and dryers, dish washers, loft installation, draught proofing, cavity wall insulation, solid wall insulation, integrated digital televisions, fridges, freezers, hot water cylinders and glazing.

This logo ensures that the item meets the criteria set out by the Energy Saving Trust.

Fridges, freezers, washing machines and dryers carry an energy efficient label. It shows how much energy an appliance uses from A-G. A being the most efficient.
